

Identifications, Molekular Cloning and Characterisation of Homospermidine Synthase and Deoxyhypusine Synthase from Phalaenopsis and Crotalaria Species

By Niknik Nurhayati

Cuvillier Verlag Mrz 2004, 2004. Taschenbuch. Book Condition: Neu. 208x147x12 mm. Neuware - DHS- and HSS-encoding cDNAs of Phalaenopsis have been successfully identified using a degenerate oligonucleotide primed PCR cloning strategy. Both enzymes showed different expression patterns. DHS are expressed in all investigated plant organs (root, leaf, stalk, flower and bud), whereas HSS is expressed specifically in root tips and young flower buds. At least three different intronless pseudogenes related to HSS were identified in cDNA pools prepared from Phalaenopsis stalk. One of them showed characteristics of processed pseudogene that can be recognized by the presence of poly A tail. These intronless pseudogenes have been proven to be transcribed. They assumed having arisen by retrotransposition. Two different cDNA sequences, both code for active DHS (named DHS1 and DHS2) were identified from Crotalaria juncea. Despite of coding for the same enzyme, DHS1 and DHS2 showed different expression patterns as well as different levels of DHS/HSS activity. DHS2 exhibited a relatively high HSS activity but a low DHS activity, whereas DHS1 indicated a high DHS activity and a low HSS activity. DHS1 is expressed ubiquitously in all investigated plant organs (root, leaf, shoot tip, flower and bud), whereas DHS2 was only found...

Reviews

A fresh e book with an all new viewpoint. It can be rally exciting through studying period of time. You will like the way the writer write this publication.
